

GDG Management Portal

Product Feature Overview

This document highlights all the core features and capabilities of the upcoming GDG Management Portal. It is written in simple, non-technical language to help the PR, Marketing, and Product teams understand exactly what the application does and how it benefits our community.

1. Smart Dashboard & Quick Access

- ✓ **Personalized Greetings:** The app welcomes users with a personalized message based on the time of day.
- ✓ **Community Snapshot:** Instantly see how many members are active, how many are alumni, and who is currently on leave.
- ✓ **Quick Action Buttons:** Smart shortcuts that change based on your role (e.g., normal members see "Apply Leave", while admins see "Assign Task").
- ✓ **Global Search:** A powerful search bar at the top to instantly find any task, team member, meeting, or document.

2. Tasks & Projects Management

- ✓ **My Tasks & Calendar:** Members can view their assigned work in a clean list or pinned on a monthly calendar view.
- ✓ **Complete Workflow:** Members can 'Accept' a task, 'Submit' their work, and mentors can review and provide ratings/feedback.
- ✓ **Task History (Audit Trail):** A visual timeline showing the entire journey of a task—who created it, when it was assigned, and when it was completed.
- ✓ **Workload Analytics:** Beautiful graphs on the dashboard showing how much work is distributed across different teams (like Web Dev or App Dev).

3. Meeting & Attendance Hub

- ✓ **Smart Meeting Invites:** Meetings only show up for the specific batch or domain they are meant for. No spamming everyone!
- ✓ **One-Click Join:** Seamless integration to open Google Meet (or other platforms) directly from the app.
- ✓ **Attendance Tracking:** Admins can easily mark who attended the meeting and record reasons for those who were absent.
- ✓ **Minutes of Meeting (MOM):** Important notes and agendas are saved within the meeting card for everyone to review later.

4. Leaves, Forms & Data Collection

- ✓ **Leave Application:** Members can apply for leave for a specific date, task, or meeting. Admins can approve or reject these with one tap.
- ✓ **Dynamic Forms:** Instead of using third-party tools, admins can create custom forms directly in the app to collect data or feedback from members.
- ✓ **Export Data:** Admins can view all form responses in a detailed table and easily download them as an Excel/CSV file.

5. Team Chat & Collaboration

- ✓ **Dedicated Chat Rooms:** Real-time group chats divided by domains (e.g., specific chat room for the App Team).
- ✓ **File Sharing:** Users can drag-and-drop or upload images and documents directly into the chat.
- ✓ **Smart Mentions (@):** Tag a specific team member in the chat to send them an instant push notification on their phone.
- ✓ **Typing Indicators:** See when someone is typing a message in real-time, making conversations feel alive.

6. Announcements & Document Hub

- ✓ **Instant Alerts:** An in-app Notification Bell keeps members updated on new tasks, approved leaves, and upcoming meetings.
- ✓ **Community Broadcasts:** Admins can post major news and updates that appear directly on everyone's dashboard.
- ✓ **Central Repository:** A secure vault for essential community documents. Access is strictly controlled so members only see files relevant to their role.

7. Powerful Administration & Control

- ✓ **SuperAdmin Dashboard:** A bird's-eye view of the entire organization with high-level metrics and controls.
- ✓ **Team Directory:** A clean, searchable list of all community members and their contact details.
- ✓ **Bulk Onboarding:** Instead of adding members one-by-one, admins can upload a single CSV file to instantly onboard an entire batch of students.
- ✓ **Custom Access Roles:** A flexible security system where admins can create custom roles (like 'Mentor' or 'Domain Head') and strictly control what they are allowed to see and do in the portal.
